

Customization

We offer extensive customization for VisionAI Toolkit in the form of various custom integration services

Overview

Customization can take many different forms, such as:

- Retraining:

Model retraining is the process of adding new data to an existing AI model and evaluating the model performance by fine tuning.

Find more details about this [here](#).

- Custom Integration:

Our Custom Integration services deal with enabling analytics support in the form of dynamic reporting, online alerts and high scalability with integration of Azure IoT hub.
