

Vehicle Activity Suite

Vehicle activity in and around the factory refers to the movement of vehicles within the factory premises and its surrounding areas. This activity can be monitored and analyzed using various techniques, including the use of sensors, cameras, and other tracking technologies.

This suite consists of various scenarios that are designed to manage, analyze, and optimize vehicle activity in and around the factory. These include:

- vehicle activity detection
- vehicle speed detection
- vehicle policies enforcement
- vehicle usage monitoring
- vehicle cargo detection
- vehicle licence plate detection
