

Equipment Temperature Monitoring

IR Camera based scenario. For critical machines, which can overheat and cause problems - monitor temperatures continually - and notify when anomalous temperatures are detected. Some times even small durations of high temperatures may indicate that something is wrong - or cause more wear for the machines in the long run

TODO: Provide an overview

Vision AI based monitoring

!!! Note TODO: Continuous equipment temperature monitoring. How Vision AI can help with this Set up thresholds what areas we are monitoring. Set up event thresholds of how often we should be informed. Put some images & diagrams for different machines & industry use-cases here.

Events

!!! Note TODO: Event details What type of events are generated. What is the frequency of these events What is the event data which is sent out.

Configuration

!!! Note TODO: Configuration How to configure this scenario. Cameras can see an area, mark areas where exits are present.

Model Details

Dataset

TODO:

- Indoor vs Outdoor environments
- Male vs Female
- Day vs Night
- Different types of clothing

- Different distances from the camera
- Various lighting conditions
- Various camera angles and resolutions
- Using security camera feeds

Model

TODO: mode metrics.

Model Name	PERSON DETE...
Precision	84.0%
Recall	85.1%
mAP	81.5%

and landmark detection model gives the following metrics:

Model Name	LANDMARK DE...
Precision	84.0%
Recall	72.8%
mAP	84.9%

The model is light-weight enough to be run on any edge devices.

Scenario details

TODO: Enforcement scenarios. How to configure & use this scenario.

TODO: Implement these as multi-tab content views. - Test now with online Web-Cam
- With RTSP Camera - Pipelines - With Azure Setup

Features

TODO: List of features here. Highlight why this is the most efficient way to implement this.

Training with custom data

The scenario is provided as part of our GPL-v3 package for VisionAI. If you wish to train this with custom datasets, please contact us and we can provide you with the training code. You can do custom training with your own datasets for free, as long as it complies with GPLv3 license (you give back the code to the community). If you are interested in a custom license, please (contact us)[contact.md].
