Equipment Monitoring

Equipment Monitoring deals with monitoring of equipment in a factory or warehouse to ensure that the equipment is working properly and is not being misused.

VisionAI can be used to monitor the equipment and alert the user if the equipment is not working properly or is being misused.

There are many events that could trigger an alert for events related to monitoring of equipments. Here are a few use cases:

- Equipment temperature monitoring
- Equipment rust and corrosion
- Equipment vibration monitoring
- Equipment noise monitoring
- Read analog dials
- Tools check-in/out
- Spill & leak
